WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

EXPLANATORY MATTER

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

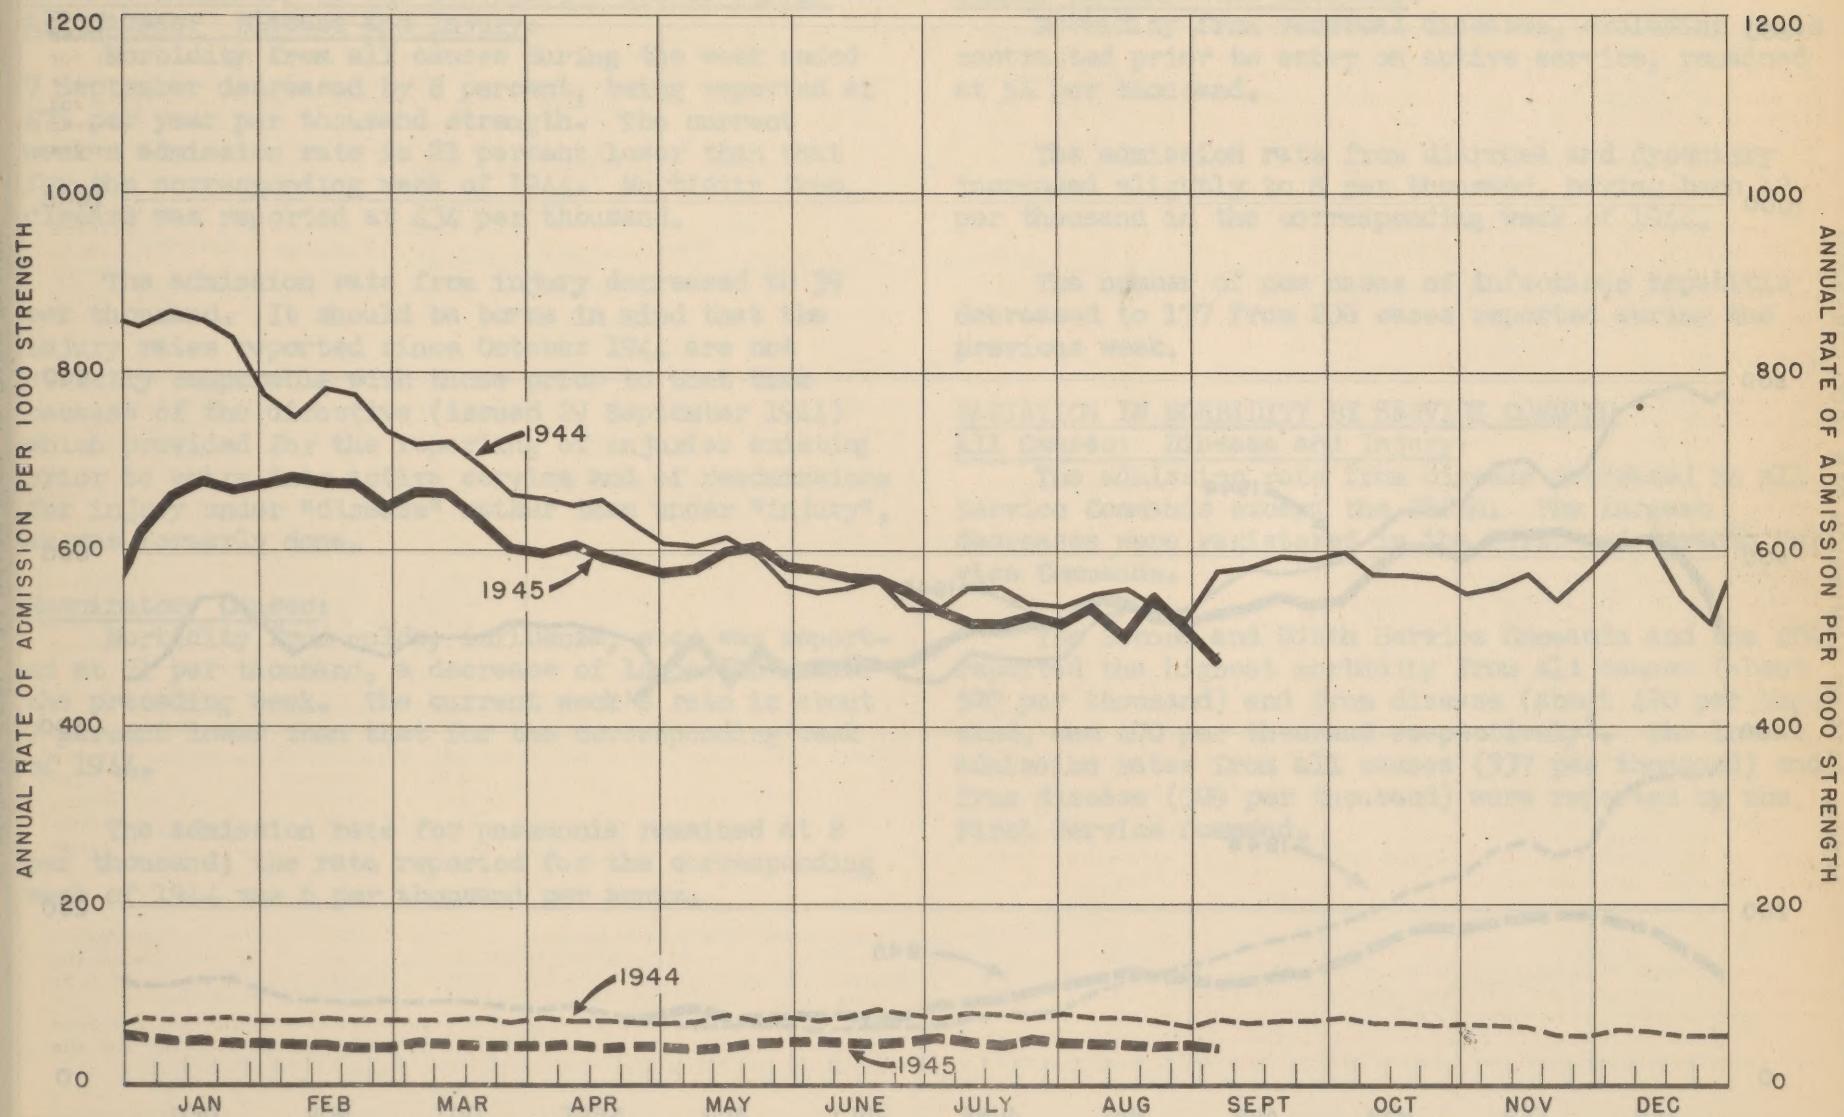

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

COMMENT ON CURRENT TRENDS

CURRENT MORBIDITY IN THE CONTINENTAL UNITED STATES

All Causes: Disease and Injury:

Morbidity from all causes during the week ended 7 September decreased by 8 percent, being reported at 473 per year per thousand strength. The current week's admission rate is 21 percent lower than that for the corresponding week of 1944. Morbidity from disease was reported at 434 per thousand.

The admission rate from injury decreased to 39 per thousand. It should be borne in mind that the injury rates reported since October 1944 are not strictly comparable with those prior to that time because of the directive (issued 29 September 1944) which provided for the reporting of injuries existing prior to entry into active service and of readmissions for injury under "disease" rather than under "injury", as was formerly done.

Respiratory Causes:

Morbidity from colds, influenza, etc. was reported at 71 per thousand, a decrease of 14 percent under the preceding week. The current week's rate is about 7 percent lower than that for the corresponding week of 1944.

The admission rate for pneumonia remained at 8 per thousand; the rate reported for the corresponding week of 1944 was 6 per thousand per annum.

Common Communicable Diseases:

Morbidity from venereal diseases, excluding cases contracted prior to entry on active service, remained at 54 per thousand.

The admission rate from diarrhea and dysentery increased slightly to 8 per thousand, having been 12 per thousand in the corresponding week of 1944.

The number of new cases of infectious hepatitis decreased to 177 from 206 cases reported during the previous week.

VARIATION IN MORBIDITY BY SERVICE COMMAND

All Causes: Disease and Injury:

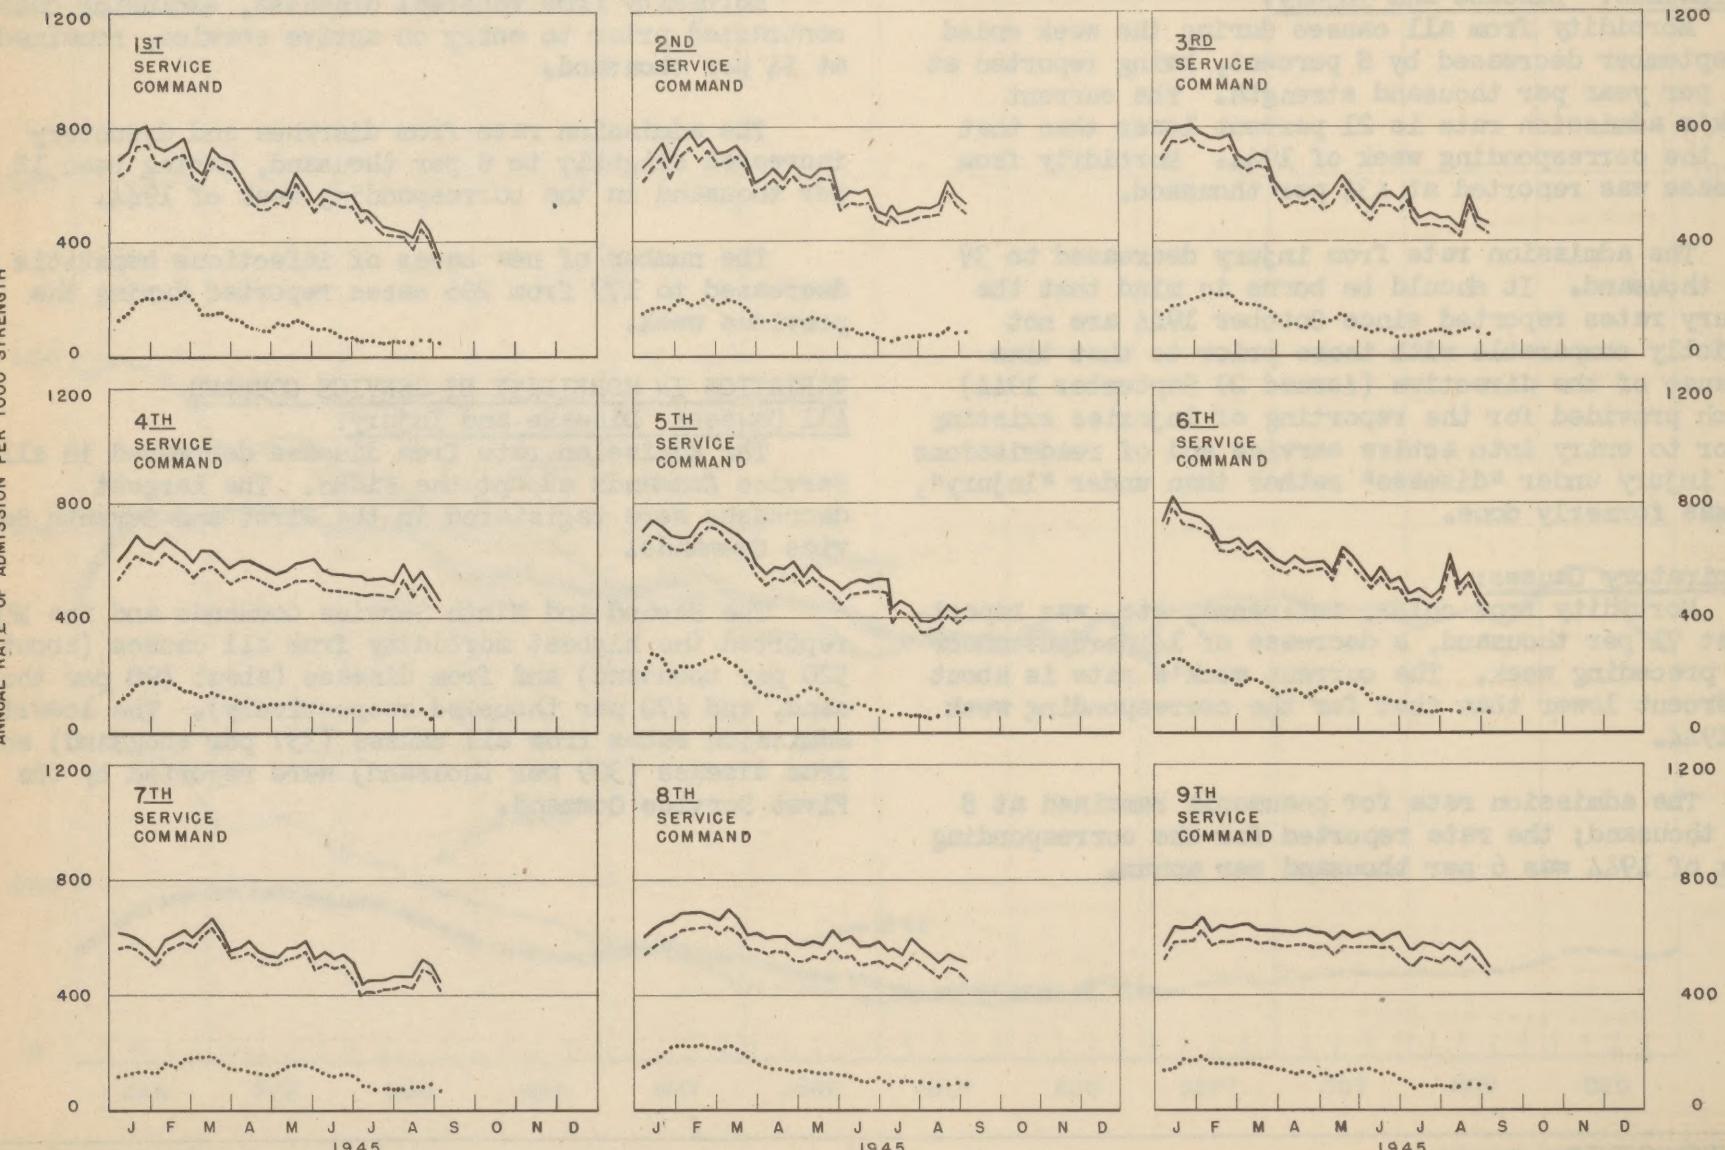

The admission rate from disease decreased in all Service Commands except the Fifth. The largest decreases were registered in the First and Seventh Service Commands.

The Second and Ninth Service Commands and the MDW reported the highest morbidity from all causes (about 520 per thousand) and from disease (about 490 per thousand, and 470 per thousand respectively). The lowest admission rates from all causes (337 per thousand) and from disease (309 per thousand) were reported by the First Service Command.

VARIATIONS BY SERVICE COMMAND
 CONTINENTAL UNITED STATES

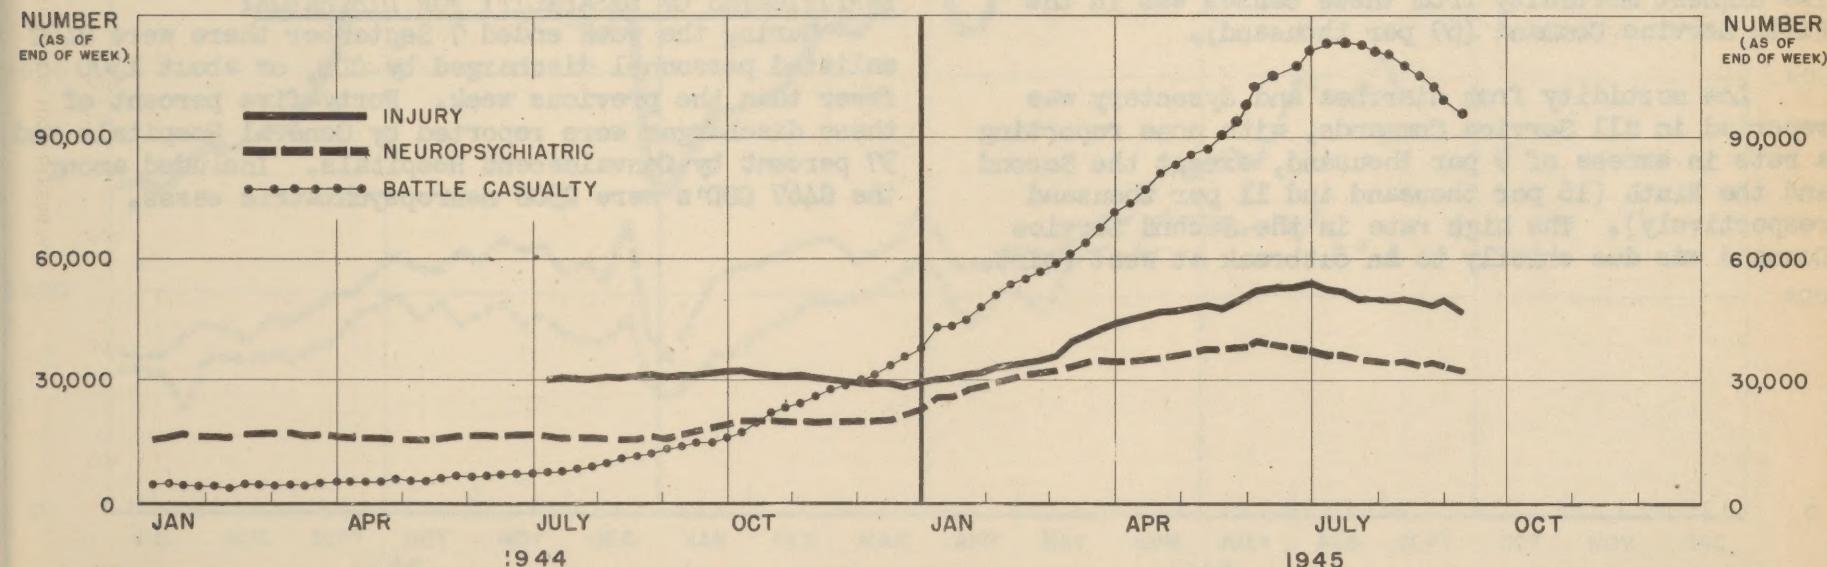

NON-EFFECTIVE RATE

CONTINENTAL UNITED STATES

PATIENTS REMAINING UNDER TREATMENT

CONTINENTAL UNITED STATES

COMMENT ON CURRENT TRENDS (CONT'D)

The Fourth, Eighth, and Ninth Service Commands reported the highest morbidity from injury (above 41 per thousand). All other Commands reported rates of less than 40 per thousand.

Respiratory Causes:

Morbidity from colds, influenza, etc. decreased in all Service Commands except the Second and Fifth. The MDW reported the highest morbidity from these causes (96 per thousand), while the lowest was registered by the First Service Command (45 per thousand). All Service Commands except the MDW had rates under 86 per thousand.

Common Communicable Diseases:

Morbidity from venereal diseases, excluding EPTS cases decreased in all Service Commands, except the First, Second, and Third, where the rates increased by 6 percent, 12 percent, and 18 percent respectively. The highest morbidity from these causes was in the Fifth Service Command (69 per thousand).

Low morbidity from diarrhea and dysentery was reported in all Service Commands, with none reporting a rate in excess of 9 per thousand, except the Second and the Ninth (16 per thousand and 11 per thousand respectively). The high rate in the Second Service Command was due chiefly to an outbreak at West Point.

NON-EFFECTIVE RATE:

The non-effective rate for personnel stationed in the continental United States is estimated at 29.3 per thousand strength for the week ended 7 September as compared with 30.5 per thousand for the corresponding week of 1944. The mean number of non-effectives in this country, including evacuees from overseas, decreased to 80.8 per thousand troops in this country.

PATIENTS REMAINING UNDER TREATMENT: 7 September 1945:

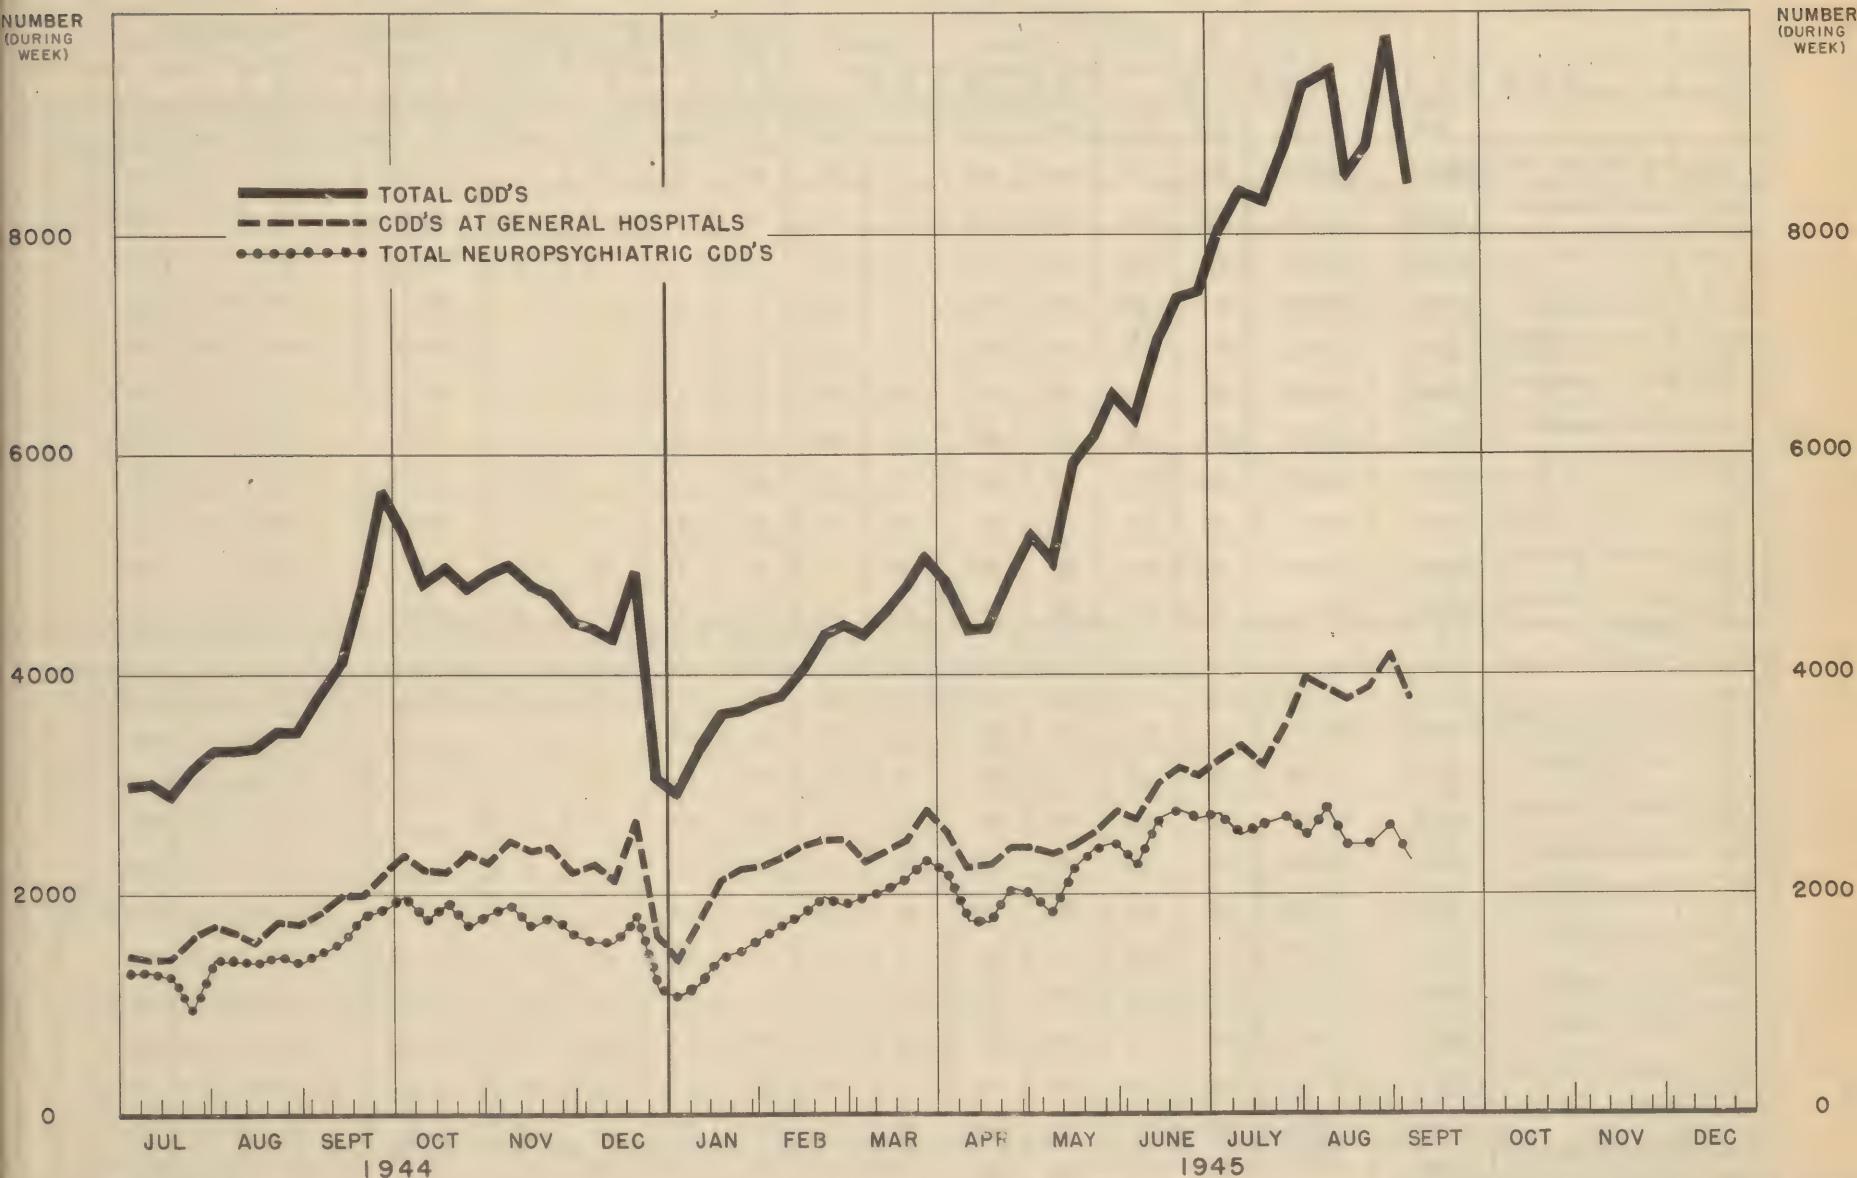

The number of neuropsychiatric cases remaining was 32,201 or about 900 fewer than at the end of the previous week. Non-battle injury patients remaining numbered about 46,700. The number of battle casualty patients remaining decreased by about 3000 to number 95,950.

CERTIFICATES OF DISABILITY FOR DISCHARGE:

During the week ended 7 September there were 8467 enlisted personnel discharged by CDD, or about 1300 fewer than the previous week. Forty-five percent of these discharges were reported by General Hospitals and 37 percent by Convalescent Hospitals. Included among the 8467 CDD's were 2308 neuropsychiatric cases.

Palm Springs AAF, Calif.

WOMENS ARMY CORPS

During August special WAC reports were received from 51 selected stations which included most of the stations in the United States having a WAC strength of over 300. The WAC strength of the 51 reporting stations was 35 percent of the total WAC strength in the continental United States.

During the five week period ended 31 August the annual admission rate from all causes among WAC personnel at 51 selected stations increased (by 2 percent) to 769 per year per thousand strength. The August admission rate from all causes for the WAC was 32 percent above that for the total Army in the continental United States, reflecting the well-known fact that morbidity among women is considerably higher than among men.

Morbidity from all causes during August varied appreciably by station, reflecting in large part the relatively small numbers of personnel at most of the reporting installations. The all causes admission rates in general ranged from 500 to 1200 per thousand. Fort Bragg, N. C. and Fort Myer, Va. were the only stations which reported rates in excess of 1400 per thousand (1837 and 1720 per thousand respectively).

The August admission rate from injuries for the WAC decreased to 42 per thousand as compared with 43 per thousand for the total Army in the United States.

Morbidity from colds, influenza, etc. increased sharply from 82 per thousand in July to 135 per thousand in August which was about 70 percent higher than the corresponding rate for the Army as a whole.

Morbidity from all forms of pneumonia was reported at 10 per thousand in August or 25 percent higher than the corresponding rate for the Army as a whole.

Morbidity from diarrhea and dysentery for the WAC was reported at 9 per thousand, which is about 30 percent higher than the August rate for the total Army.

In August neuropsychiatric disorders among the WAC accounted for an admission rate of 26 per thousand, an increase of about 25 percent over the previous month.

The number of CDD's at the 51 selected WAC stations averaged about 14 per week during August, as compared with a weekly average of about 20 during the six-month period of February through July.

WOMEN'S ARMY CORPS (CONT'D)

As of 31 August there were 637 WAC patients remaining in hospital and quarters at the 51 selected stations. In addition to the 594 WAC's remaining in hospital at the selected stations there were 1138 WAC's occupying beds in General Hospitals (exclusive of Tilton, Pickett and Walter Reed which are among the selected stations). The number of WAC's occupying beds at Station, Regional, and Convalescent Hospitals, exclusive of the 51 selected stations, was 813. Thus, the total number of WAC's occupying hospital beds as of the end of August was 2534 or about 2 percent lower than the corresponding figure for the past four months.

The number of WAC's occupying hospital beds as of the end of August represented a rate of 34 per thousand strength of the WAC in the continental United States. For the total Army in the continental United States the corresponding figure was in the neighborhood of 29 per thousand when evacuees from overseas were excluded.
